

DO YOUR NETWORK & APPLICATIONS GET ALONG?

Imagine no compatibility issues, no conflicts.

Like family, IP-based enterprise networks and their applications should rely on each other. But living under the same roof doesn't guarantee harmony. And that discord comes at a high cost. F5 products bring everyone into perfect agreement by creating a virtual team out of servers, applications, WAN links, data centers, security devices and more to intelligently deliver information over any IP network.

When everyone is working together, you'll achieve the high availability performance you need, combined with an efficient, secure network infrastructure that ensures the reliable delivery of Internet traffic, applications or Web services—all at a cost you can afford.

Imagine harmony that produces world-class performance. To learn how, download our free guide, "Delivering secure, predictable and cost-effective applications" at www.f5zoom.com/eom. Or call 800-916-7155.

CONTROL YOUR WORLD

THE RIGHT PIECE BRINGS IT ALL TOGETHER.

Imagine giving your applications optimal performance on blade servers.

Thanks to the blade server platform, you've reduced everything—server size, space, cables, management overhead and most importantly, costs. But then you realize that even when consolidated, the new server platform still has to meet the same demands: it has to be highly available, secure, scalable and completely reliable in its performance.

How do you meet those demands without sacrificing all you've just gained? F5's BIG-IP® Blade Controller software provides traffic management that virtualizes and load balances the blade server environment. Now you can pool blades and concentrate their power, route traffic to those that are performing well, and manage them as a single entity. And with BIG-IP Blade Controller loaded directly onto blade servers, you're guaranteed to achieve the high availability performance it takes to reliably deliver applications.

Give your imagination free reign and your bottom line room to grow.
